OMID AHMADI

SOFTWARE DEVELOPMENT ENGINEER IN TEST

PROFESSIONAL SUMMARY

Software Test Engineer with 7+ years of experience in software testing and development, specializing in automation and quality engineering. Skilled in designing and executing test automation frameworks for web, mobile, API, and backend systems using tools such as Selenium, Appium, Playwright, Cypress, TestNG, and Cucumber. Proficient in backend and API testing with Rest Assured, POSTMAN, SOAP UI, Kafka, ETL validation, and advanced SQL for large-scale data integrity. Experienced in financial systems, payment processing, and compliance-driven testing of high-value transactions. Strong expertise in integrating automated suites into CI/CD pipelines (Jenkins, GitHub Actions, Azure DevOps, AWS Code Pipeline) to enable continuous testing and faster delivery. Hands-on with multiple programming languages (Java, Python, JavaScript, C#) and scripting in Linux environments. Adept at end-to-end functional, regression, integration, and UAT testing within Agile and Waterfall models, ensuring reliable, compliant, and high-quality software releases.

EMPLOYMENT HISTORY

FEB 2023 - PRESENT

Senior Test Automation Engineer, AT&T (Direct TV), Los Angeles, CA

- Designed, developed, and executed comprehensive test plans, test cases, and automation suites for set-top box software, mobile apps, and web platforms, ensuring consistent performance across diverse devices (TVs, remotes, tablets, smartphones, routers, switches).
- Built and maintained scalable automation frameworks (Selenium WebDriver, Appium, Cypress, Protractor, Playwright) applying Page Object Model (POM), Data-Driven Testing, and BDD (Cucumber/Gherkin) for reusability and reliability.
- Automated testing of web, mobile (iOS/Android), and backend systems using Java, Python, JavaScript, and C#, with integration into CI/CD pipelines for faster and continuous delivery.
- Validated video streaming and entertainment services, including Video on Demand, PUSH content, YouTube, and Pandora, ensuring seamless playback and user experience.
- Used PuTTY/SSH to access Linux-based systems for set-top box configurations, service updates, authorizations, and troubleshooting in real-time.
- Designed, developed, and executed comprehensive test plans, test cases, and automation suites for set-top box software, mobile apps, web platforms, and the DIRECTV SignalSaver project, ensuring seamless performance across TVs, remotes, tablets, smartphones, routers, and switches.
- Built and maintained scalable Playwright frameworks with Page Object Model (POM), Data-Driven Testing, and BDD (Cucumber/Gherkin) to automate end-to-end workflows, cross-browser testing (Chromium, Firefox, WebKit), and cross-device scenarios for web and mobile apps.
- Developed Playwright automation to validate SignalSaver functionality, including mode configurations (Always Use, Always Ask, Always Off), adaptive bitrate streaming, and automatic switching during satellite signal outages.
- Automated UI, API (REST/SOAP), and backend database testing, verifying user preferences, channel availability, receiver logs, and Kafka-based messaging systems for accuracy and reliability.
- Integrated Playwright tests into CI/CD pipelines (Jenkins, GitHub Actions), enabling continuous build validation, faster regression detection, and reliable deployment of updates.
- Validated video streaming services, including Video on Demand, PUSH content, YouTube, and Pandora, ensuring uninterrupted playback and optimal user experience.
- Used PuTTY/SSH to configure Linux-based receivers, perform service updates, authorizations, and real-time troubleshooting during testing.
- Connected and configured set-top boxes using network emulators, patch panels, and cable connectors to test upgrades, rollbacks, and complex connectivity scenarios.
- Mentored team members on Playwright best practices, parallel test execution, and modern automation strategies, improving framework maintainability and overall test efficiency.
- Logged, tracked, and managed defects in Quality Center and JIRA, providing root cause analysis and ensuring prompt resolution of customer-impacting issues.
 - Connected and configured set-top boxes via network emulators, patch panels, and cable connectors to test upgrades, rollbacks, and complex connectivity scenarios.
 - Developed and executed automated test suites covering web UIs, REST/SOAP APIs, backend databases, and Kafka-based messaging systems, ensuring scalability and fault tolerance.
 - Performed advanced database testing (SQL queries, ETL validation, data integrity checks) on large-scale datasets to ensure accuracy and compliance.
 - Collaborated with developers, product teams, and business stakeholders to translate requirements into robust test coverage, supporting Agile and Waterfall lifecycles.
 - Logged, tracked, and managed defects in Quality Center and JIRA, providing root cause analysis and ensuring customer-impacting issues

were resolved quickly.

JAN 2021 - FEB 2023

Test Automation Engineer, Universal Bank, Los Angeles, CA

- Proficient in object-oriented design and skilled in programming languages such as Java and C#.
- Expertise in backend test automation frameworks including REST Assured and Karate.
- Experience with version control software (GitHub) and issue/project tracking software (Jira).
- Proficient with Zephyr JIRA plug-in, leveraging 8 years of experience for effective test management.
- Familiarity with software development/debugging tools like Postman, curl, and Chrome dev tools.
- Experienced in defining, executing, and maintaining test cases, along with building test plans for backend services.
- Strong verbal and written communication skills, including the ability to diagram system behavior.
- Developed scalable Selenium based UI regression frameworks and contributed to both unit and integration automation (with Java/Junit). Introduced behavior-driven development (BDD) with Cucumber and played a hands on role in integrating automated scripts with CI/CD pipelines using Docker and Jenkins.
- Delivered comprehensive front-end and back-end testing, including web services and database layers. Built and maintained ETL test cases, and validated backend workflows through rigorous SQL queries and automation scripts.
- Automated workflows not just in Java but across technologies adapting Python frameworks for data processing, and using JavaScript, Groovy, Protractor, and Jasmine for UI checks. Managed everything from data transformation to UI verification.
- Implemented CI/CD best practices, integrating automated smoke and regression test suites for quick, reliable releases. Automated provisioning and connectivity on Azure, including subscription and storage account management with PowerShell.
- Demonstrated analytical skills, reporting capabilities, ownership, customer focus, and collaboration.
- Proficient in BDD (Behavior Driven Development) using Cucumber Features, Scenarios, and Step Definitions in
- Gherkin.
- Maintenance of automation framework and implementation of the Page Object Model (POM) approach using Java and Selenium WebDriver.
- Experience in Page Object Model Design patterns within a Hybrid framework.
- Utilization of Jenkins as a continuous integration server for running automated test suites.
- Design and analysis of test scripts for integration, regression, functional, and acceptance testing using Selenium.
- Implementation of Regression and Smoke test execution as a discrete step in the deployment process using Selenium WebDriver.
- Preparation of reports on automation difficulties and test results using Maven.
- Conducting backend testing for data validation using SQL in Oracle, including execution of SQL queries on database tables.

MAR 2018 - DEC 2020

QA Automation Engineer, Cigna, Washington DC

API Testing and Automation Responsibilities:

- Developed and maintained end-to-end automated test frameworks across UI, API, backend, and data layers using Selenium WebDriver, Playwright, Cypress, Protractor, and REST Assured supporting BDD flows with Cucumber and Gherkin. Integrated these pipelines with Jenkins, Azure DevOps, and Docker for seamless CI/CD and continuous testing.
- Utilized GitHub for maintaining and managing build scripts, test data, and project-related documents.
- Proficient in REST API, Microservices, Web services, and API integration testing using Postman.
- Orchestrated test environments with Kubernetes, Docker, and AWS services (Cloud Formation, Cloud Watch, Cloud Front), ensuring scalable, efficient test execution and robust cloud deployments. Automated and scheduled releases using PowerShell and Azure DevOps REST APIs.
- Skilled in submitting and inspecting API payloads, proficient in troubleshooting.
- Strong knowledge of Postman tool features for collection management, parameterization, etc.
- Partnered closely with developers, product owners, DevOps, and cloud engineers to gather requirements, shape test strategies, and embed quality checks at every stage of the SDLC. Ensured clear communication and smooth project execution using JIRA for tickets, defect tracking, and sprint reporting.
- Experience in testing and developing automated tests for both REST and SOAP services using RestAssured and
- Built test harnesses for Kafka producers/consumers to monitor distributed data workflows. Automated extensive API and web service validation with Postman, REST Assured, Groovy scripts, and SOAP UI, including complex encryption/login scenarios.
- Automated test scripts creation and execution using Selenium WebDriver and TestNG.
- Developed Test Cases, Use Cases, and Automation test scripts, adhering to Quality Assurance best practices.
- Brought high standards to Salesforce CRM and Robotic Process Automation (Blue Prism, UiPath), using custom test scripts and debugging for smooth, error-free business process automation.
- Proficient in utilizing all web methods like GET, POST, DELETE for API testing.
- Capable of validating response, response time, error codes, and XML/JSON bodies using JSON parsers.
- Engineered complex SQL queries for data validation, ETL verification, and integrity checks, especially for eligibility and enrollment workflows involving third-party vendors. Leveraged XUnit, NUnit, and powerful Python scripts to simulate backend scenarios and validate business logic.
- Familiarity with authentication mechanisms and conducting Load and Security testing on web services.
- Ability to read and understand API documentations, deriving test cases and scenarios accordingly.
- Implemented parameterization of automated test scripts in Selenium to assess application performance against multiple datasets.

JAN 2016 - FEB 2018

QA Analyst (Manual Tester), State Farm Insurance, Chevy Chase, MD

- Creation of Test Requirements Specification documents, Test plans, and Test Result documentation.
- Writing Structure Query Language (SQL) queries for data population checks and verification during Backend Testing against Oracle Database.
- Preparation of meeting notes highlighting daily project execution and sending reports to management.
- Collaboration with Developers and Business Analysts to conduct various testing types throughout the Software Testing Life Cycle (STLC) and Bug Life Cycle (BLC).
- Analysis of Business Requirements Document and system specifications to determine test requirements.
- Performing Backend testing using SQL Plus and PL/SQL.
- Implemented data-driven testing approaches, utilizing property and XML files to enhance test flexibility and coverage.
- Used SOAP UI and Rest Assured frameworks to rigorously test SOAP services and REST APIs in a SOA based architecture.
- Actively engaged in Agile Scrum ceremonies including daily stand-ups, sprint planning, reviews, and retrospectives, consistently delivering tested sprint increments aligned with business priorities.
- Created automation scripts not only in Java but also in C# leveraging the .NET framework, broadening test coverage across diverse technology stacks.
- Supported build and deployment pipelines by collaborating with DevOps teams using Jenkins, GitHub, and Maven helping embed automated tests into the delivery lifecycle.
- Conducting Functional, Integration, Regression, Positive, Negative, and User Acceptance Testing (UAT).
- Creation and maintenance of all Test automation environments.
- Active involvement in day-to-day Scrum meetings.
- Working closely with QA Director to align with organizational goals and objectives.
- Environment:
 - Agile, XML, HTML, Fire Path, Firebug, Internet Explorer, Google Chrome, Jira, Azure, Safari, Mozilla Firefox, JIRA, Quality Center, SQL, Oracle, Windows.

EDUCATION

2012 - 2015

SKILLS

Test Automation & Frameworks:	Selenium WebDriver, Appium, Playwright, Cypress, Protractor, TestNG, JUnit, Cucumber (BDD), Gherkin, JUnit, NUnit, Jasmine, Groovy, PyTest, Rest Assured, SoapUI
Programming and Scripting:	Java, Python, JavaScript, C#, Typescript, SQL, Shell scripting, PowerShell, Groovy
API & Backend Testing:	Restful APIs, SOAP web services, Kafka data streams, ETL testing, Data validation, Kafka producers & consumers, Data reconciliation, Postman, Advanced SQL (Oracle, DB2, SQL Server)
CI/CD & DevOps Tools:	Jenkins, Azure DevOps, GitHub Actions, Maven, Docker, Kubernetes, Git, PowerShell scripting, AWS Code Pipeline, Azure Pipelines
Cloud Platforms & Services:	AWS (Lambda, S3, EC2, DynamoDB, Cognito, CloudFormation, CloudWatch, CloudTrail, CloudFront, VPC), Microsoft Azure (Subscription Management, Storage, VPN connectivity)
Testing Methodologies & Processes:	Agile (Scrum), Waterfall, SDLC, STLC, TDD, BDD, Continuous Testing, Regression, Functional, Integration, Smoke, Performance Testing
Test Management & Issue Tracking:	JIRA, HP ALM, Bugzilla, TestNG, Jenkins reporting
Automation Tools & Platforms:	Selenium Grid, Sauce Labs, Browser Stack, Perfecto Mobile, Blue Prism, UIPath
Databases:	Oracle, DB2, SQL Server, MySQL
Additional Skills:	Behavior Driven Development (BDD), Data-Driven Testing, Page Object Model (POM), Test Harness development, Cross-browser testing, Mobile testing (iOS & Android), Security testing (encryption/decryption validation)

COURSES

- SEP 2023 - PRESENT
- Automating Web Application at Tricentis Tosca
- APR 2023 - PRESENT
- Prince2 Agile Project Management at Google
