

OMID AHMADI

Senior SDET | QA Automation Engineer | Software Test Engineer | Quality Engineer | Technical Project Lead

Los Angeles, California 90001 | (818) 984-6362 | aomid6362@gmail.com

LinkedIn: | Portfolio: <https://siromidahmadi.github.io/Tested-by-Omid/>

CAREER SUMMARY

Senior Software Development Engineer in Test (SDET), QA Automation Engineer, Quality Engineer, and Technical Project Lead with 8+ years of experience in software quality engineering, test automation, automation framework development, API/backend testing, and technical project delivery across telecommunications, banking, healthcare, insurance, public infrastructure, and enterprise technology.

Experienced in designing, developing, and maintaining scalable automation frameworks for web, mobile, API, microservices, backend, database, streaming, cloud, and set-top-box systems using Playwright, Selenium WebDriver, Cypress, Appium, REST Assured, Postman, TestNG, JUnit, and Cucumber.

Strong programming and scripting background in Java, Python, JavaScript, TypeScript, C#, SQL, PowerShell, and Groovy, with hands-on CI/CD and DevOps experience using Jenkins, GitHub Actions, Azure DevOps, Docker, Kubernetes, AWS, and Microsoft Azure.

Experienced in test strategy, quality ownership, continuous testing, shift-left testing, release validation, regression automation, defect triage, root cause analysis, risk-based testing, Agile/Scrum, requirements analysis, and stakeholder management. Technical leadership experience includes coordinating 6 technical teams totaling 18 team members in a hybrid Digital Twins environment while working closely with stakeholders, project managers, engineers, developers, and multidisciplinary teams.

TECHNICAL SKILLS

Test Automation & Framework Engineering: Playwright, Selenium WebDriver, Cypress, Appium, Protractor, Selenium Grid, TestNG, JUnit, NUnit, PyTest, Cucumber, Gherkin, Jasmine, Automation Framework Development, Test Harness Development

Programming & Scripting: Java, Python, JavaScript, TypeScript, C#, SQL, Shell Scripting, PowerShell, Groovy, Object-Oriented Programming (OOP)

API, Microservices & Backend Testing: REST APIs, RESTful Services, SOAP Web Services, REST Assured, Postman, Karate, SoapUI, Microservices Testing, API Automation, API Integration Testing, Kafka, Kafka Producers/Consumers, XML, JSON

Database, ETL & Data Quality: Oracle, DB2, SQL Server, MySQL, Advanced SQL, Database Testing, ETL Testing, ETL Validation, Data Integrity, Data Reconciliation, Data Validation, Backend Validation

CI/CD & DevOps: Jenkins, GitHub Actions, Azure DevOps, Azure Pipelines, AWS CodePipeline, Maven, Git, Docker, Kubernetes, Continuous Integration, Continuous Delivery, Continuous Testing

Cloud Technologies: AWS, Microsoft Azure, Lambda, S3, EC2, DynamoDB, Cognito, CloudFormation, CloudWatch, CloudTrail, CloudFront, VPC, Cloud-Based Testing

Mobile & Cross-Platform Testing: Appium, iOS, Android, BrowserStack, Sauce Labs, Perfecto Mobile, Chromium, Firefox, WebKit, Safari, Chrome, Cross-Browser Testing, Cross-Device Testing

Performance, Security & Reliability: JMeter, Performance Testing, Load Testing, Reliability Testing, Authentication Testing, Encryption/Decryption Validation, API Security Validation, Negative Testing, Fault-Tolerance Testing

Test Architecture & Methodologies: Page Object Model (POM), Data-Driven Testing, Behavior-Driven Development (BDD), Test-Driven Development (TDD), Hybrid Frameworks, End-to-End Testing, Functional Testing, Integration Testing, Regression Testing, Smoke Testing, System Testing, UAT, Exploratory Testing

Digital Twin & Geospatial QA: Digital Twin Testing, Geospatial QA, Interactive Map Validation, Spatial Data Validation, ArcGIS Integration, Unreal Engine 5, 3D Visualization Testing, AR/VR/XR Validation

Accessibility & UX Testing: Accessibility Testing, WCAG Validation, Screen Reader Testing, Responsive Design Testing, Cross-Device Testing, Usability Validation

Enterprise & RPA: Salesforce CRM, Blue Prism, UiPath, Robotic Process Automation (RPA) Testing

Test & Project Management: JIRA, HP ALM/Quality Center, Zephyr, Bugzilla, Agile/Scrum, Waterfall, SDLC, STLC, Requirements Traceability, Defect Lifecycle Management, Risk Management

Project & Facilities Management: Facilities Project Management, Project Controls, Project Lifecycle Management, Construction Document Review, Project Scheduling, Budgeting Awareness, Project Reporting, Document Control, Records Management, Infrastructure Projects, Sustainability, Green Construction, EVCS, Stakeholder Coordination

Leadership & Delivery: Technical Leadership, QA Leadership, Scrum, Cross-Functional Leadership, Stakeholder Management, Project Coordination, Change Leadership, Creative Problem-Solving, Conflict Resolution, Team Mentoring, Continuous Improvement

Additional Tools: Linux, Windows, PuTTY, SSH, Chrome DevTools, Microsoft Excel, Word, PowerPoint, Teams, Outlook, Google Workspace, Bluebeam

Languages: English and Farsi - Bilingual

TECHNICAL & PROJECT LEADERSHIP PROJECTS

Project Lead - Architecture, Quality Engineering & Technical Delivery

California Center Digital Twins Hub | Hybrid | California

- Led and coordinated technical activities across 6 cross-functional teams of 3 members each, totaling 18 team members, supporting multiple Digital Twin initiatives through planning, QA, integration, validation, and delivery.
- Worked in a hybrid environment with stakeholders, project managers, engineers, developers, and multidisciplinary technical teams to align requirements, priorities, dependencies, risks, and deliverables.
- Translated stakeholder requirements and project objectives into actionable engineering, QA, testing, integration, and project-delivery activities.
- Coordinated quality strategy, test planning, integration testing, system validation, defect management, risk identification, troubleshooting, and delivery readiness across multiple project teams.
- Applied creative leadership, collaborative problem-solving, adaptability, innovation, and change-management principles when coordinating teams through evolving technical requirements and project challenges.
- Served as a bridge between technical and nontechnical stakeholders, communicating project status, QA findings, technical risks, blockers, dependencies, and recommended solutions.
- Led quality validation involving Digital Twins, geospatial applications, interactive maps, spatial datasets, 3D environments, XR/AR/VR experiences, responsive web applications, and accessibility features.
- Supported engineering and QA activities involving ArcGIS, Unreal Engine 5, spatial data, 3D visualization, cross-browser testing, mobile validation, and accessibility testing.
- Maintained consistent quality practices across six teams while supporting each project's individual technical requirements.
- Promoted knowledge sharing, accountability, continuous improvement, stakeholder communication, and cross-functional collaboration throughout project delivery.
- Supported technical delivery for Shade-LA, USGBC Wildfire Resilience Guide, ASU Reclamation Project, Baldwin Hills 6-Mile Corridor, Pando Populus, and PUHC Innovation Alleys.

Pando Populus

- Performed data-quality and geospatial application validation involving information representing 6,447 residents.
- Tested 8 community-characteristic toggles, risk-score logic, multi-hazard overlays, filtering behavior, responsive UI functionality, and interactive visualization.
- Conducted functional, integration, UI, data-integrity, and regression testing across geospatial datasets, visual layers, business logic, and user controls.

Shade-LA

- Performed geospatial QA, functional testing, integration testing, and interactive map validation across multiple application layers.
- Conducted cross-browser and responsive testing across Chrome, Firefox, Safari, mobile, and desktop environments.
- Validated spatial-data presentation, overlays, map interactions, navigation, and user-facing application behavior.

USGBC Wildfire Resilience Guide

- Performed accessibility, WCAG, bilingual-content, data-integrity, cross-device, and responsive-design testing.
- Validated screen-reader/read-aloud functionality and accessibility-related interactions.
- Performed browser compatibility and responsive validation across supported devices.

ASU Reclamation Project

- Supported Digital Twin QA, XR testing, AR/VR validation, 3D rendering validation, accessibility testing, and spatial-data pipeline testing.
- Conducted functional and visual validation of interactive Digital Twin experiences across supported environments.

Baldwin Hills 6-Mile Corridor

- Performed geospatial QA, interactive map testing, functional testing, and regression validation.
- Tested navigation, zone filtering, spatial overlays, responsive behavior, and mobile/desktop compatibility.

PUHC Innovation Alleys

- Performed quality validation for a 3D Digital Twin solution integrating Unreal Engine 5 and ArcGIS.
- Conducted visualization, integration, functional, and performance testing across 4 project zones.
- Validated intervention layers involving shade, murals, urban farming, and other urban visualization components.

DIRECTV SignalSaver - Streaming Resiliency & Test Automation

AT&T / DIRECTV

- Designed and executed test strategy, automation, system, integration, regression, and end-to-end testing for DIRECTV SignalSaver.
- Developed Playwright automation covering SignalSaver configurations including Always Use, Always Ask, and Always Off.
- Validated adaptive bitrate streaming, failover behavior, service resiliency, and satellite-to-internet streaming transitions.
- Built reusable automation using Playwright, Page Object Model, Data-Driven Testing, BDD, Cucumber, and Gherkin.

- Automated UI, REST/SOAP API, backend, database, receiver-log, and Kafka-message validation.
- Validated customer preferences, channel availability, receiver configurations, streaming behavior, and backend data integrity.
- Used Linux, PuTTY, SSH, logs, and system diagnostics for troubleshooting, debugging, root cause analysis, and defect investigation.
- Configured hardware/software integration environments using set-top boxes, network emulators, patch panels, routers, switches, and cable connections.
- Performed upgrade, rollback, network-interruption, failover, connectivity, and resiliency testing.
- Validated VOD, PUSH content, YouTube, Pandora, and other streaming functionality.
- Integrated Playwright suites with Jenkins and GitHub Actions to support continuous regression testing and release validation.
- Mentored team members on Playwright, parallel execution, debugging, automation framework design, and maintainable test architecture.

PROFESSIONAL EXPERIENCE

Software Engineer May 2026 - Present

BuildLACCD - Los Angeles Community College District | Los Angeles, CA

- Design, build, and maintain a new internal web application for tracking PMO Priority Projects at BuildLACCD, covering requirements gathering, data-model and database design, feature development, bug fixes, and ongoing maintenance and user support.
- Coordinate monthly MLA Priority Project Lists across 9 LACCD campuses, supporting PMO governance, project controls, portfolio reporting, documentation management, and districtwide project tracking.
- Support facilities and infrastructure project activities throughout the project lifecycle, including project documentation, construction document review, deliverables, scheduling coordination, reporting, and stakeholder follow-up.
- Collect, validate, organize, and maintain approved PDF priority lists and Excel working files from campus project teams, supporting document control, records management, data accuracy, and project reporting.
- Build and maintain the Districtwide MLA Excel tracker as a centralized data system for portfolio tracking, status monitoring, project controls, and stakeholder visibility.
- Identify data gaps and inconsistencies across submissions, debug and resolve tracking discrepancies, and coordinate with project controls personnel and stakeholders toward resolution.
- Apply facilities project-management concepts involving project initiation, planning, scheduling, budgeting awareness, project deliverables, construction documentation, reporting, and project closeout.
- Support Electric Vehicle Charging Station (EVCS), sustainability, green construction, and infrastructure project analysis through review of drawings, specifications, project documentation, and charging-stall counts.
- Perform construction document review, drawing review, discrepancy analysis, data validation, quality control, and document verification — applying the same analytical rigor used in software QA.
- Use Bluebeam and Microsoft Excel (formulas, structured data models, and automation-driven workflows) for construction document review, project tracking, data analysis, reporting, and project-control activities.
- Collaborate with project managers, project engineers, project controls specialists, campus teams, consultants, and program stakeholders to maintain accurate project information.
- Manage recurring deadlines, project records, stakeholder communication, follow-ups, and multiple campus priorities within a facilities and construction PMO environment.

Senior Test Automation Engineer / SDET February 2023 - Present

AT&T / DIRECTV | Los Angeles, CA

- Own and execute test strategy, test planning, test design, automation development, execution, defect management, and release validation across set-top-box, web, mobile, API, database, backend, and streaming platforms.
- Design, develop, and maintain scalable automation frameworks using Playwright, Selenium WebDriver, Appium, Cypress, and Protractor.
- Apply Page Object Model, BDD, Cucumber, Gherkin, Data-Driven Testing, reusable framework architecture, and automation best practices.
- Develop test automation using Java, Python, JavaScript, and C#.
- Build automated coverage across UI, REST/SOAP APIs, backend services, databases, and Kafka messaging systems.
- Perform advanced SQL, ETL, database, data-integrity, and backend validation across large datasets.
- Execute functional, integration, regression, smoke, system, end-to-end, API, mobile, cross-browser, and exploratory testing.
- Validate VOD, PUSH content, YouTube, Pandora, video streaming, and entertainment functionality.
- Configure and troubleshoot Linux-based receivers using PuTTY, SSH, logs, debugging, and root cause analysis.
- Perform hardware/software integration testing using TVs, remotes, tablets, smartphones, routers, switches, network emulators, patch panels, and set-top boxes.
- Integrate automated suites with Jenkins and GitHub Actions CI/CD pipelines, supporting continuous integration, continuous testing, regression detection, and deployment confidence.
- Manage the defect lifecycle, defect triage, bug reporting, root cause analysis, and regression verification using JIRA and HP Quality Center.
- Collaborate with software developers, product teams, engineers, business stakeholders, and QA teams throughout Agile and Waterfall SDLCs.
- Mentor team members on Playwright, automation architecture, parallel execution, debugging, framework maintenance, and quality-engineering practices.

Test Automation Engineer January 2021 - February 2023

Universal Bank | Los Angeles, CA

- Designed and maintained Selenium WebDriver automation frameworks using Java, JUnit, Cucumber, BDD, and Page Object Model for financial applications.
- Developed API and backend automation using REST Assured and Karate for RESTful services, integrations, and business logic.
- Performed financial systems testing, payment workflow testing, transaction validation, compliance-driven testing, and data-integrity validation.
- Created and executed functional, integration, regression, smoke, acceptance, API, backend, and database test suites.
- Implemented BDD using Cucumber Features, Gherkin Scenarios, and Step Definitions, supporting requirements traceability and reusable automation.
- Performed frontend, backend, API, web-service, database, ETL, and end-to-end testing.
- Used advanced SQL to validate financial data, transformations, backend processing, data reconciliation, and database integrity.
- Developed automation using Java, Python, JavaScript, Groovy, Protractor, and Jasmine.
- Integrated automated smoke and regression suites into Jenkins and Docker-based CI/CD pipelines.
- Supported Azure provisioning, subscription management, storage, and connectivity automation using PowerShell.
- Used GitHub for version control and JIRA/Zephyr for test management, requirements traceability, and defect tracking.
- Performed API troubleshooting, debugging, and root-cause investigation using Postman, curl, and Chrome DevTools.
- Communicated quality risks, test results, defects, release readiness, and automation challenges to developers and stakeholders.

QA Automation Engineer March 2018 - December 2020

Cigna | Washington, DC

- Developed and maintained end-to-end automation frameworks across UI, API, backend, database, and data layers using Selenium WebDriver, Playwright, Cypress, Protractor, REST Assured, Cucumber, and Gherkin.
- Integrated automated testing with Jenkins, Azure DevOps, Docker, and CI/CD pipelines to support continuous testing.
- Performed REST API, SOAP web-service, microservices, integration, and backend validation using Postman, REST Assured, Groovy, and SoapUI.
- Validated API payloads, response times, HTTP status/error codes, JSON/XML bodies, authentication, and negative/error scenarios.
- Developed Kafka producer/consumer test harnesses for distributed-system and data-flow validation.
- Supported cloud and containerized test environments using Kubernetes, Docker, AWS CloudFormation, CloudWatch, and CloudFront.
- Automated release-related activities using PowerShell and Azure DevOps REST APIs.
- Maintained automation source code, test data, build scripts, and technical documentation using GitHub.
- Developed Selenium WebDriver/TestNG automation supporting functional, integration, smoke, and regression coverage.
- Created advanced SQL queries for data quality, ETL validation, eligibility/enrollment processing, third-party integration, and data-integrity testing.
- Used xUnit, NUnit, and Python to simulate backend scenarios and validate business rules.
- Performed Salesforce CRM and RPA testing using Blue Prism and UiPath.
- Conducted authentication, encryption/decryption, performance, load, security, and reliability validation of web services.
- Partnered with developers, product owners, DevOps engineers, cloud engineers, and QA teams throughout the Agile/Scrum SDLC.

QA Analyst / Manual Tester January 2016 - February 2018

State Farm Insurance | Chevy Chase, MD

- Created test plans, test cases, test scenarios, requirements specifications, execution documentation, and test-result reports based on business and system requirements.
- Performed requirements analysis, test-coverage analysis, test design, traceability, and acceptance-criteria validation.
- Executed functional, integration, regression, positive, negative, backend, exploratory, and User Acceptance Testing (UAT).
- Performed database and backend validation using SQL, SQL Plus, PL/SQL, and Oracle.
- Tested REST APIs and SOAP web services using REST Assured and SoapUI.
- Implemented data-driven testing using property and XML files to expand test coverage.
- Developed Java and C#.NET automation scripts to support regression automation.
- Supported CI/CD and build validation using Jenkins, GitHub, and Maven.
- Managed the defect lifecycle by collaborating with developers and business analysts on reproduction, triage, verification, and regression testing.
- Participated in daily stand-ups, sprint planning, sprint reviews, and retrospectives.
- Prepared QA status reports and communicated quality risks, testing progress, defects, and release readiness to management.
- Collaborated with QA leadership to align testing with project requirements, SDLC processes, and organizational quality objectives.

ADDITIONAL LEADERSHIP & MANAGEMENT EXPERIENCE

Software Manager / Scrum Master

Aura Engine | California

- Coordinated Agile software delivery, sprint planning, backlog execution, cross-functional collaboration, and technical team activities.
- Facilitated Scrum ceremonies including daily stand-ups, sprint planning, sprint reviews, retrospectives, and blocker resolution.
- Applied leadership communication, creative problem-solving, adaptability, and change-management principles when guiding teams through changing requirements and project challenges.
- Partnered with technical and nontechnical stakeholders on requirements gathering, clarification, prioritization, dependency management, and delivery planning.
- Supported project planning, risk management, conflict resolution, decision-making, documentation, status reporting, and delivery tracking throughout the SDLC.
- Applied quality engineering and shift-left testing principles to identify risks and quality concerns earlier in development.
- Promoted psychological safety, knowledge sharing, mentoring, accountability, continuous improvement, innovation, and collaborative problem-solving.
- Helped teams navigate uncertainty and change while maintaining focus on project objectives and delivery commitments.

VOLUNTEER EXPERIENCE

Technology Mentor April 2026 - Present

LA-Tech | Los Angeles, CA

- Mentor aspiring technology professionals in software testing, QA automation, software engineering, technical problem-solving, and career development.
- Provide guidance on technical skill development, career preparation, problem-solving, and technology career pathways.
- Promote knowledge sharing, continuous learning, professional development, and practical technical problem-solving.

EDUCATION

Bachelor's Degree in Computer Science 2012 - 2015

Jami University | Herat, Afghanistan

Associate of Arts - General Studies: STEM August 2024 | Magna Cum Laude

Los Angeles Pierce College | Woodland Hills, CA

Associate of Arts - Social & Behavioral Sciences August 2024 | Magna Cum Laude

Los Angeles Pierce College | Woodland Hills, CA

Software Programming January 2022 - December 2022

Tek School

Hands-on training in software development, programming fundamentals, object-oriented programming, software engineering, test automation, debugging, and technical project development.

CERTIFICATES, COURSEWORK & PROFESSIONAL DEVELOPMENT

Facilities Project Management / Facilities Management

Facilities Management Certificate Coursework

- Training in facilities project management, focusing on successfully managing projects from initiation through completion.
- Coursework covers construction document reading, project deliverables, project scheduling, budgeting, project reporting, project coordination, and project lifecycle management.
- Developed practical knowledge of green construction practices, sustainable facilities, construction documentation, project planning, cost awareness, schedule management, and project reporting.
- Strengthened skills applicable to facilities management, construction project management, project controls, capital projects, infrastructure projects, and PMO environments.

Creativity, Innovation & Leadership - BSICSKL 079CE

Workplace Success I: Creative Leadership Certificate of Completion

- Culminating leadership coursework focused on applying creativity, innovation, leadership, and self-awareness to real-world workplace situations.
- Examined personal leadership style and approaches to leading teams through organizational change, uncertainty, conflict, and evolving workplace challenges.
- Completed structured leadership activities, assessments, and reflective assignments focused on practical leadership development.
- Developed skills in leadership communication, creative problem-solving, innovation, change leadership, decision-making, conflict resolution, adaptability, and team leadership.

Additional Certifications & Professional Development

- Automating Web Applications - Tricentis Tosca | September 2023 - Present
- PRINCE2 Agile Project Management | April 2023 - Present
- Digital Twins / AEC Fellowship | Fall 2025
- Workplace Harassment - U.S./California | March 2023

- Build Agile Transformation with Collaborative Teams | February 2023

LEADERSHIP DEVELOPMENT

Creative Leadership & Professional Leadership Development

BSICSKL 072CE / BSICSKL 079CE | 2026

- Completed leadership development focused on self-awareness, creativity, innovation, communication, psychological safety, accountability, leadership presence, organizational change, and collaborative leadership.
- Analyzed personal leadership style and how leadership behaviors influence team communication, decision-making, trust, accountability, and organizational effectiveness.
- Developed practical approaches for leading through change, navigating uncertainty, resolving conflict, communicating ideas, and encouraging innovation.
- Strengthened creative problem-solving, emotional awareness, adaptability, stakeholder communication, and cross-functional leadership.
- Developed a leadership approach centered on team enablement, knowledge sharing, mentoring, continuous improvement, psychological safety, and sustainable systems.
- Created a professional leadership portfolio documenting leadership philosophy, communication approach, strengths, lessons learned, change reflection, and continued professional growth.

ADDITIONAL QUALIFICATIONS

- 8+ years of QA, SDET, software testing, quality engineering, and automation experience.
- Technical leadership experience coordinating 6 teams / 18 team members.
- Experience collaborating in hybrid environments with stakeholders, project managers, engineers, developers, and multidisciplinary teams.
- Web, mobile, API, backend, database, streaming, cloud, set-top-box, Digital Twin, geospatial, accessibility, and XR testing experience.
- Strong programming and scripting background across Java, Python, JavaScript, TypeScript, C#, SQL, PowerShell, and Groovy.
- Experience across telecommunications, banking, healthcare, insurance, public infrastructure, and enterprise software.
- Hands-on experience with AWS, Azure, Docker, Kubernetes, Jenkins, GitHub Actions, and Azure DevOps.
- Experience with Agile/Scrum, technical mentoring, facilities project management, project coordination, stakeholder communication, and cross-functional leadership.
- Bilingual in English and Farsi.
- U.S. Citizen.
